

4-HOUR LIVE COACHING · PARTICIPANT EDITION

AI CONTENT MASTERY

Build a brand's entire content engine — live, in one afternoon. The complete step-by-step playbook, every prompt, and the system to run it yourself.

LIVE CASE STUDY INSIDE: GGC — GYM GIRLS CLUB

HOSTS · KARIM AZZAOUÏ + THARISHA RISHYA

STACK · CLAUDE × HIGGSFIELD via MCP

winsym.ai · "I translate business into AI."

HOW TO USE THIS WORKBOOK

This is your take-home copy of everything we built together. You don't need to remember the buttons — tools change. You need the **workflow**, the **prompts**, and the **one idea** that makes all of it work.

Work through it in order, or jump to the segment you need. Every prompt is copy-paste ready — type it straight into Claude. Anything in [SQUARE BRACKETS] is a placeholder for you to fill with your own brand. At the back you'll find the **System Operator Prompt** — one prompt that rebuilds this entire studio for your business in a fresh chat.

**"AI GIVES YOU AVERAGE — UNLESS YOU GIVE IT A BRAIN.
THE BRAND BRIEF IS THE BRAIN."**

THE ONE SENTENCE THAT RUNS THE WHOLE SYSTEM

THE 4 GOLDEN RULES

- **Give it a brain first.** Paste your brand brief before you make anything. A briefed tool is on-brand; an un-briefed tool is a slot machine.
- **Direct, then correct.** AI is a brilliant junior. You don't accept the first draft — you give feedback and it fixes it. Off-brand output is part of the workflow, not a failure.
- **One clear action per shot.** Vague prompts make mush. Stack specific modifiers; ask for one thing at a time.
- **Test one, then batch.** Approve a single asset before you generate a hundred. Protect your time and your credits.

WHAT YOU'LL BE ABLE TO DO

A FULL BRAND KIT

Research, positioning, a product line and 9 finished assets — from one prompt.

CINEMATIC VIDEO

Single- and multi-shot clips, and blend your real footage with AI.

A 100-VIDEO SYSTEM

Research → calendar → batch production → ads → cost, on a schedule.

YOUR OWN AUTOMATION

Reusable skills, a tracker, and a weekly autopilot you control.

THE DAY, IN NINE MOVES

1	Set up the studio — Claude + Higgsfield via MCP	p.05
2	Know your tools — the right model for every job	p.06
3	One prompt, a whole brand — built live	p.07
4	Make it move — Seedance video mastery	p.08
5	100 videos, automated — the Content Factory	p.09
6	Lock it in — your own skills + a tracker	p.10
7	Automation + the 7 mistakes that kill results	p.11
★	The System Operator Prompt — rebuild it yourself	p.12
✓	Your next step	p.14

THE BRAND BRIEF = THE BRAIN

Paste this once at the very start of any session, and pin it. Everything downstream references it — every image, every video, every line of copy. This is the single thing that separates a pro from someone getting garbage.

P0.1 — THE BRAND BRIEF (PASTE & PIN FIRST)

You are my brand content director. For the rest of this session, every asset you create is for this client. Hold this brief in memory and apply it to everything:

BRAND: [name + legal entity, country]
CATEGORY: [what we are / what we sell]
FOUNDER/FACE: [name, age, the 1-line human story]
CORE LINE: [signature line + locked/flexible structure]
MISSION: [the change we create, one sentence]
VOICE: [tone in %, and what we NEVER do]
PALETTE: [primary + support HEX, text HEX, colors to avoid]
TYPE FEEL: [headline / label / accent font feel]
IMAGERY: [subjects, grade, mood, what to avoid]
HERO PRODUCT: [main product + scarcity/launch angle]
AUDIENCE: [who, age, where they find us, sub-types]
PRIMARY CTA: [the first action we want]

Confirm you've absorbed this in 2 lines, then wait for my next instruction.

Tip: save your filled-in version somewhere handy — you'll reuse the exact same brief every time you open a new chat.

SET UP THE STUDIO

MCP is just the cable between Claude's brain and Higgsfield's hands. Claude decides what to make; Higgsfield makes it. Connect them once — then direct an entire studio in plain English.

DO THIS, IN ORDER

1

Connect Higgsfield

In Claude desktop, open connectors / settings and add Higgsfield as an MCP connector. Connect once; use all day.

2

Set permissions to "ask / confirm"

Never leave it on *Always Allow* — that lets generations run silently and burn your credits. This is Mistake #3.

3

Run the cable test

Prove the connection works before you rely on it.

4

Paste the brand brief (P0.1)

Load the brain *before* you make anything, so every later output is on-brand.

S2.2 — THE CABLE TEST

List the image and video models you can access through Higgsfield right now, and tell me in one line what each is best for.

If it returns the model list, the cable is live. If it asks permission every time, check your connector permission setting.

P0.2 — REFERENCE-IMAGE LOCK-IN (SAY BEFORE ANY IMAGE/VIDEO GEN)

Use the attached image as the exact product/reference. Keep the product shape, colours and printed text identical. Match my palette and grade. Do not invent a different version.

KNOW YOUR TOOLS

Five tools, five jobs. Pick the right one and the output is great; pick wrong and you fight the tool. Here's the map — and where each one fails, so you trust it.

MODEL	BEST FOR	WATCH OUT
Nano Banana Pro	Clean studio product photos	Heavy text on image
GPT Image 2	Ad creatives with a headline baked in	Long paragraphs still mangle
Cinema Studio	Cinematic frames + camera control	Version label changes — read it off screen
Seedance 2.0	Video — single & multi-shot	Drifts without a consistency rule
Marketing Studio	UGC formats (convert highest), URL-to-video	Keep it authentic, not over-produced

ONE QUICK ASSET PER MODEL

P3.1 — NANO BANANA PRO · PRODUCT PHOTO

Using Higgsfield Nano Banana Pro, create a premium e-commerce product photo of [PRODUCT]. Studio scene: [BACKDROP + PROPS], soft natural window light, gentle shadows, 4:5 vertical. Editorial, clean. Match my palette.

P3.2 — GPT IMAGE 2 · AD CREATIVE WITH TEXT

Using Higgsfield GPT Image 2, create a 4:5 ad creative. Headline: "[HEADLINE]". Subline: "[SUBLINE]". Show [SCENE]. On-brand, premium, not cluttered.

P3.3 — CINEMA STUDIO · STORYBOARD FRAME

Using Higgsfield Cinema Studio, generate a cinematic storyboard frame: [SUBJECT + ONE ACTION], [LIGHT], mood: aspirational, film grain. 16:9.

P3.5 — MARKETING STUDIO · UGC VIDEO

Using Higgsfield Marketing Studio, create a UGC-style talking video: a relatable person holds [PRODUCT] and says: "[NATURAL LINE]". Authentic phone-shot look, vertical 9:16, warm and friendly.

ONE PROMPT, A WHOLE BRAND

Watch what happens when you ask for the whole brand at once: market research, positioning, a product line, and nine finished assets — in a single pass. Yesterday that was a quote and a two-week timeline.

P4.1 — THE ONE PROMPT

Act as my full brand & content studio. Using the brand brief you absorbed earlier, do all of this in one pass and show your work as you go:

1. MARKET SNAPSHOT: 4 bullet insights on my market and what I can own that competitors don't.
2. POSITIONING: one-sentence positioning + 3 messaging pillars, in my voice.
3. PRODUCT LINE: 3 launch products under my brand system, one line of copy each.
4. ASSET SET — for EACH product generate, via Higgsfield, using my palette and grade:
 - 1 product photo (Nano Banana Pro)
 - 1 ad creative with on-image headline (GPT Image 2)
 - 1 short UGC-style video (Marketing Studio)

That's 9 assets total. Keep every product consistent. Begin, and tell me each step as you complete it.

THE LESSON: SAME TOOL, DIFFERENT BRAIN

BAD — NO BRIEF, NO REFERENCE

GENERIC SLOP

"Make a product photo of a shaker for a fitness brand." → random, off-brand.

GOOD — BRIEF + REFERENCE

ON-BRAND, EVERY TIME

Re-run P3.1 with the brief loaded and the real product uploaded. → consistent.

Same tool. The only difference is the brain and the reference. **This is the whole game.**

P4.3 — FIX IT LIVE (WHEN SOMETHING DRIFTS OFF-BRAND)

That one drifted off-brand — [WHAT'S WRONG, e.g. background too dark, wrong colour]. Redo it: [THE CORRECTION], keep it on-brand to the brief. Show me the corrected version.

MAKE IT MOVE

Cinematic video isn't luck — it's a formula. Put this on screen and copy it every time. One clear action per shot; stack the modifiers.

**MODEL + SHOT TYPE & LENGTH + ONE CLEAR ACTION + LIGHT + LENS / DEPTH +
GRADE / MOOD + ASPECT RATIO + CONSISTENCY RULE**

P6.4 — THE PROMPT FORMULA. THE MOST USEFUL LINE IN THE DECK.

P6.1 — SINGLE-SHOT CINEMATIC

Using Higgsfield Seedance 2.0, single shot, 9:16, ~6 seconds: [SUBJECT performs ONE clear action]. [LIGHT], gentle film grain, shallow depth of field, [GRADE]. Calm, aspirational, real.

P6.2 — MULTI-SHOT SEQUENCE (WITH A CONSISTENCY RULE)

Using Higgsfield Seedance 2.0, create a multi-shot sequence, 9:16, [MOOD/GRADE]:
Shot 1 (3s): [action]. Shot 2 (3s): [action]. Shot 3 (3s): [action]. Shot 4 (2s):
product hero — [PRODUCT] readable.
Keep the same subject, wardrobe and grade across all shots.

P6.3 — BLEND REAL FOOTAGE + AI CONTINUATION

Use the attached real clip as the opening footage. Continue it with Seedance 2.0 in the same lighting, colour grade and camera energy: extend into a [N]-second AI continuation where [ACTION]. Match grain and motion so the cut is invisible. 9:16.

SETTINGS THAT MATTER

- **Character limit** — tighten the prompt, don't pad it.
- **Resolution** — test at low (fast, cheap), finalise at high. Save time, save credits.

100 VIDEOS, AUTOMATED

It's a system, not a trick: research feeds the calendar, the calendar feeds production, production feeds ads, ads feed the numbers. Five stages.

P7.1 — STAGE 1 · TREND RESEARCH

Run Stage 1 of the Content Factory. Research current trending formats, hooks and audio themes in [MY NICHE] for Reels and TikTok this month. Return the top 10 angles that fit my voice, each with a one-line hook idea.

P7.2 — STAGE 2 · 30-DAY CALENDAR

Stage 2: from those angles, build a 30-day content calendar — one short-form video per day. For each: date, hook, format, the line it uses, and the CTA. Output as a table with a STATUS column.

P7.3 — STAGE 3 · BATCH PRODUCTION

Stage 3: take the first 10 calendar entries and generate them as videos through Higgsfield (Marketing Studio for UGC, Seedance for cinematic). Keep palette, voice and look consistent. List each with its hook and status.

P7.4 — STAGE 4 · META ADS

Stage 4: from the 10, pick the 3 strongest as paid ad candidates for Meta. For each give: objective, primary text, headline, and which audience to target. Note why it will perform.

P7.5 — STAGE 5 · COST ANALYSIS

Stage 5: build a cost comparison table for producing 100 UGC videos: traditional production vs this AI workflow. Show per-video cost, total, and time. Use realistic current numbers and label any assumptions.

Always verify cost/credit numbers live before you quote them — never quote a number you didn't just see. (Mistake #6.)

LOCK IT IN

Stop re-explaining yourself to AI. A skill is your best workflow, saved once and reused forever. A tracker keeps the whole engine from regenerating the same thing twice.

P8.1 — TURN A WINNING FORMAT INTO A REUSABLE SKILL

Take the format that performed best today and turn it into a reusable Claude skill called "[brand]-ugc-reel". The skill should: accept a product name and a hook, then output a ready Marketing Studio prompt in my voice and palette, plus 3 caption options and 5 hashtags. Write the SKILL.md for me.

P8.2 — THE CONTENT TRACKER (GOOGLE SHEET)

Design a Google Sheet to run my content pipeline. Columns: Date | Hook | Line | Format | Model used | Prompt link | Asset link | STATUS (Idea / Generating / Ready / Posted / Boosted) | Platform | Result. Explain why STATUS is the most important field, then give me the header row to paste.

THE STATUS COLUMN IS WHAT STOPS YOUR AUTOMATION REGENERATING THE SAME VIDEO 50 TIMES AND BURNING YOUR CREDITS.

NO STATUS COLUMN = RUNAWAY ROBOT. THIS IS MISTAKE #4.

AUTOMATION + THE 7 MISTAKES

P9.1 – WEEKLY AUTOMATION CYCLE

Design a simple weekly content automation: a Sunday "planning" run (research + fill next week's calendar rows with status=Idea) and a Monday "production" run (generate everything still marked Idea, set to Ready). Describe each as a scheduled task I could set up, including the exact instruction the task would run.

THE 7 MISTAKES THAT QUIETLY KILL RESULTS

1 No brand brief → generic slop.

The output is only as smart as the brain you gave it.FIX · P0.1

2 No reference image → inconsistent products.

Upload the real thing and tell it to match.FIX · P0.2

3 Permissions on "Always Allow" → silent credit burn.

Keep it on ask/confirm.FIX · SEGMENT 1

4 No STATUS column → duplicate generations.

The tracker is what makes automation safe.FIX · P8.2

5 Vague prompts / many actions per shot → mush.

One clear action. Stack modifiers.FIX · P6.4

6 Quoting costs you didn't verify → wrong numbers.

Never quote what you didn't just see.FIX · VERIFY LIVE

7 Batching before testing one → 100 bad videos.

Test one, approve, then scale.FIX · TEST → BATCH

THE TAKE-HOME SUPERPOWER

THE SYSTEM OPERATOR PROMPT

One prompt that turns a blank Claude chat into your personal AI content studio — for *your* brand. Paste it, fill in your brief, and rebuild everything you saw today.

THE SYSTEM OPERATOR PROMPT

Replace the bracketed lines in Part A with your real brand, then paste the whole block. Claude pauses after each setup step so you stay in control.

```
You are my AI CONTENT STUDIO OPERATOR. For the rest of this chat you run a complete content studio for one brand (mine). You think and direct; you use the Higgsfield MCP connector as your hands to generate images and video. Make on-brand assets and teach me in plain English as we go.
```

```
=== PART A – MY BRAND BRIEF (your "brain" – apply to EVERYTHING) ===
```

```
BRAND: [name + legal entity, country]
CATEGORY: [what we sell / what we are]
FOUNDER / FACE: [name, age, 1-line human story]
CORE LINE / TAGLINE: [signature line + locked/flexible structure]
MISSION: [the change we create, one sentence]
VOICE: [tone in %, and what we NEVER do]
PALETTE: [primary + support HEX, text HEX, colours to avoid]
TYPE FEEL: [headline / label / accent font feel]
IMAGERY: [subjects, grade, mood, what to avoid]
HERO PRODUCT: [main product + scarcity/launch angle]
AUDIENCE: [who, age, where they find us, sub-types]
PRIMARY CTA: [the first action we want]
```

```
=== PART B – HOW WE WORK (rules) ===
```

1. Every asset must pass Part A. Fix off-brand output before showing me.
2. Before any image/video, restate the ONE clear action + the look in one line, then generate.
3. For a set, reuse the same subject, wardrobe, palette, grade; reference my real product image when given.
4. Right tool for the job: product photo→Nano Banana Pro; ad-with-text→GPT Image 2; cinematic frame→Cinema Studio; video→Seedance; UGC→Marketing Studio.
5. Video prompts use: MODEL + SHOT TYPE & LENGTH + ONE CLEAR ACTION + LIGHT + LENS/DEPTH + GRADE/MOOD + ASPECT RATIO + CONSISTENCY RULE. One action per shot. Test low-res, finalise high.
6. Never quote a cost/credit number you didn't just verify.
7. Track everything with STATUS (Idea/Generating/Ready/Posted/Boosted) – never regenerate twice.
8. Keep permissions on ask/confirm, never always-allow.

...RUN THIS SETUP SEQUENCE

=== PART C – WHAT TO DO RIGHT NOW ===

Do these in order. Pause after each step, show me the result, wait for my "go."

STEP 1 – CABLE TEST. Confirm you can reach Higgsfield: list the image and video models you can access now, one line each. If you can't reach it, tell me exactly how to connect the Higgsfield MCP connector and which permission to choose.

STEP 2 – ABSORB THE BRAIN. Read Part A, confirm in 2 lines you've absorbed it. If any field is empty or weak, ask me before we make anything.

STEP 3 – ONE TEST ASSET. Generate ONE on-brand product photo (Nano Banana Pro) from my brief (and my reference image if uploaded). Show it. We approve or correct before scaling.

STEP 4 – THE ONE-PROMPT BRAND KIT. On my go, in one pass: (a) 4-bullet market snapshot, (b) 1-sentence positioning + 3 pillars in my voice, (c) a 3-product line with one line of copy each, (d) for each product: a product photo (Nano Banana Pro) + an ad creative with headline (GPT Image 2) + a UGC video (Marketing Studio). Narrate each step.

STEP 5 – THE CONTENT SYSTEM. On my go: 10 trending angles in my voice → a 30-day one-video-per-day calendar (table w/ STATUS) → batch-produce the first 3 → pick 3 strongest for Meta Ads with copy + targeting → a verified cost comparison vs traditional.

STEP 6 – LOCK IT IN. On my go: turn my best format into a reusable skill (write the SKILL.md), give me a Google Sheet header row with a STATUS column, and design a Sunday-planning + Monday-production weekly automation as scheduled tasks.

Start with STEP 1 now. Keep it concrete, teach as you go, keep me on-brand.

The full, copy-paste version of this prompt is also in your resource pack as O5_SYSTEM-OPERATOR-PROMPT.md (straight quotes, ready to paste).

YOUR NEXT STEP

YOU WATCHED THE SURFACE. NOW GO **BUILD.**

Everything in this workbook you can run yourself, starting today. Open a fresh Claude chat, paste the System Operator Prompt, drop in your brand brief — and make your first on-brand asset before you close the laptop.

1

Load the brain. Paste your brand brief first — always.

2

Test one asset. Approve it before you batch.

3

Scale it. Calendar, ads, automation — on a schedule.
