

CORTEX

The Business Intelligence Operating System

A governed digital brain every organization can install — and grow into.

THE PROBLEM

Every company leaks its own intelligence

1

Knowledge walks out the door

When a key person leaves, years of context vanish. The business pays to re-learn what it already knew.

2

The same questions, answered 1,000 times

“How do we handle this refund?” “What’s our policy on X?” — answered inconsistently, from memory.

3

Decisions on opinion, not evidence

The loudest voice or latest anecdote wins, because the history is too scattered to consult in the moment.

4

Tools are silos

The CRM doesn’t know the contracts; the contracts don’t know the meeting; the meeting never reaches the work.

Growth without a brain doesn’t scale the company — it scales the chaos.

THE SOLUTION

Not a chatbot. The brain a company runs on.

CORTEX captures what the business knows, runs how it works, supports its decisions, and acts on a cadence — grounded in stored, sourced knowledge, and it never fabricates.

1

Knowledge Graph

Every decision, customer, contract and risk is a node; relationships are typed edges. The brain reasons, not just retrieves.

2

Governance / RBAC

Sensitivity on the data, clearance on the user, enforced server-side. The CEO and the front desk see different views of one system.

3

Grounded Trust Layer

Answers only from what's stored — with sources, a confidence band, and a named human approver for high-stakes output.

3 pillars · 8 functional layers · 1 continuous improvement loop (the CORTEX Method)

THE CATEGORY

We're creating a category: BIOS

Business Intelligence Operating System — the governed layer that sits above every tool, person and decision in the company. Search, chat, CRM and agents are features of it, not alternatives to it.

~80%

of enterprises deploying generative
AI by 2026

**\$12B →
\$80B**

SEA AI market, 2026 → 2031

~68%

Malaysia professional AI adoption

14–18%

KM software market CAGR

High intent, low maturity, weak governance — the perfect moment for a governed brain, starting in Southeast Asia.

THE PRODUCT

One brain, eight functions

A small business switches on 3 layers; an enterprise runs all 8. Same platform, different views.

Clients buy their way up a 5-level ladder

The iron rule: never automate (L5) on top of unverified knowledge (L1). The maturity gap is the value case in every sale.

BUSINESS MODEL

Build once. Configure per industry. Sell many.

Platform

The 8-layer brain, sold as recurring SaaS across 4 tiers.

RECURRING REVENUE

Implementation

The CORTEX Method captures the client's knowledge and stands up their brain.

HIGH-MARGIN WEDGE

Industry Templates

Reusable per-vertical packs — vocabulary, scoring, compliance, starter SOPs.

THE SCALABILITY ENGINE

Services-led to learn the verticals and fund the build → platform-led recurring revenue as templates mature. A brain must be trusted before it's bought; new verticals are new templates, not new engineering.

THE OFFER

Four tiers, one upgrade path

	STARTER	GROWTH	PROFESS.
Target	Solo / micro	SME (10-250)	Mid-market
Maturity	L1 → 2	L2 → 3	L3 → 4
Layers	2-3	4-5	6-7
Automations	Read-only	Schedules	Workflows
Deployment	Multi-tenant	Multi-tenant	MT/isolated

ENTERPRISE
2.5K-10K+ employees
Level 4 → 5
All 8 lobes
Full cadence + triggers
Single-tenant / VPC / on-prem

Add-ons monetize the variable layer: extra industry templates, additional brand-brains (agencies), premium integrations, compliance packs.

PRICING

Priced on value & maturity — three regions

Year-1 total (setup + 12 months). SEA is the anchor; EU and Premium are variants.

Region	STARTER	GROWTH	PROFESSIONAL	ENTERPRISE
Malaysia / SEA	RM 20.4K	RM 60K	RM 141K	RM 336K+
Europe / DACH	€ 7.9K	€ 24.8K	€ 64K	€ 167K+
Premium (USD)	\$ 10.2K	\$ 36K	\$ 107K	\$ 270K+

The wedge: our Growth tier (~USD 13K Year-1) lands below the ~\$60K–108K floors of Glean and ChatGPT Enterprise — while delivering far more than search or chat. Enterprise still undercuts a Palantir engagement by an order of magnitude. We win on value-per-dollar at the mid-market, not per-seat price wars.

COMPETITION

Everyone owns a slice. Nobody owns the brain.

Player	Indicative 2026 price	Gap vs. CORTEX
Palantir Foundry/AIP	Custom; 6-7 figures	Unreachable for SME/mid-market
Glean	~\$50/user; ~\$60K+ ACV floor	Answers only; no execution/memory
ChatGPT Enterprise	~\$50-60/user; ~\$108K/yr floor	Generic; can fabricate; no governed graph
MS Copilot / Notion AI	\$30 / \$20 per user	No business graph, weak governance
Salesforce Agentforce	\$2/conv · ~\$125/user	Locked-in; agents on ungoverned base

Our moat: the governance + trust layer, the compounding knowledge graph + memory, the proprietary template library, and the repeatable CORTEX Method. Generic AI can't copy the trust layer without rebuilding its core.

WHY THIS IS CREDIBLE

Productized from a system that already works

CORTEX is the domain-neutral extraction of the MIPP PIOS — a real, governed “leadership brain” built for a national political organization.

It solved the hardest version of a universal problem: capture what the people at the top know, prevent the AI from making things up, and control who sees what — in a domain where one fabricated fact causes real damage.

Remove the politics and what remains — governance, grounded retrieval, memory, the knowledge graph, the maturity model, the verification layer — is already industry-neutral.

Already in hand

- ✓ Proven governed architecture (graph + RBAC + grounded RAG)
- ✓ The CORTEX Method delivery system
- ✓ A framework ready to template across verticals
- ✓ Founder with Google + Meta Partner credibility, KL-based

The political build stays a confidential, separate implementation. CORTEX is the company.

The diagnostic is the pitch

1

Diagnose

Place the prospect on the maturity ladder — the gap is the value case.

2

Demo

A live, grounded, fully-sourced answer — then a deliberate “I don’t know.” That closes regulated buyers.

3

Land

Start with the 1–2 layers that hurt most; prove ROI fast at Level 2.

4

Expand

Sell the climb: more layers, departments, integrations. NRR ~115%.

Beachhead: regulated verticals (law firms, clinics) where the trust layer sells itself — KL/Malaysia first, then SEA, then DACH via the German-language advantage. Win 2–3 references per vertical, harden the template, repeat.

ROADMAP

Framework → Services → Platform → SaaS

Phase 1

Done-for-you Brain Setup

Services-led pilots, one vertical.
Revenue + references.

Phase 2

Brain as a Service

Productize: graph + RBAC +
grounded RAG + trust layer.

Phase 3

Managed Operating System

Switch on automation +
integrations for earned maturity.

Phase 4

Own SaaS Platform

Self-serve floor + enterprise ceiling
+ template marketplace.

Sequencing is the strategy: trust, then revenue, then product, then scale.

A capital-efficient path to \$2.6M revenue

USD	Year 1	Year 2	Year 3
Total revenue	\$214K	\$921K	\$2.59M
Recurring (ARR)	\$148K	\$670K	\$1.95M
Gross margin	72%	73%	74%
EBITDA	(\$25K)	\$154K	\$765K
Active clients	16	76	243

\$1.95M

Year-3 ARR

~74%

Gross margin

~115%

Net rev. retention

THE ASK

Raising to fund the platform

Bootstrap Phase 1 from winsym.ai cash flow + a USD 150–300K angel/grant round.

Use of funds: first 2 engineers, a sales hire, and the platform MVP (Phase 2).

Convert to a priced seed (~\$1.5–3M) once 2–3 reference clients and one hardened vertical template are in place.

Why invest now

- New category (BIOS) with a defensible governance moat
- Services-to-SaaS margin story (40% → 80% +)
- SEA-to-global expansion path
- Proven architecture, not a science project

CORTEX

Give every organization a brain — governed, trustworthy, and built to grow with them.

Winning systems, backed by a brain.
